

AIRCARBON
FOODWARE

AIR IS MORE

THE WORLD'S FIRST FOODWARE MADE
FROM AIR AND GREENHOUSE GAS.

THE CHALLENGE

To avoid the worst of climate change, the world must achieve net-zero carbon emissions in this decade. But how?

THE QUESTION

What if the products we use every day could reverse the flow of carbon?

THE ANSWER

After more than 10 years of research and development, we found a way to replicate on land a natural process that's been occurring in the ocean for millions of years. Naturally-occurring microorganisms consume air and greenhouse gas and transform them into PHB: a meltable, moldable material.

We call it AIRCARBON.

AIRCARBON®: A naturally-occurring, compostable, carbon-negative material made from air and greenhouse gas, to reverse the flow of carbon.

THE WORLD'S MOST SUSTAINABLE FOODWARE

Carbon Negative. Climate Positive. Air is More.

| | AIRCARBON | PLASTIC | PLA | PAPER | CPLA | AGAVE |
|-----------------------------------|---|---|---|---|---|---|
| Good for hot & cold food & drinks |  |  | | |  | |
| Home-compostable |  | | |  | | |
| Industrially compostable |  | |  |  |  |  |
| Regenerative: carbon-negative |  | | | | | |

- 1 : 1

The weight of every Aircarbon straw, spoon, and fork you hold is at least equal to the weight of carbon (CO2e) diverted from the air to make it.
